Audit #209 · Generated 2026-10-31 22:47

Website Audit Foreword

Hi Construction Project Management System,

Is your website working for you — or against you? This report takes the guesswork out of that question. It measures what actually matters to your site's success: user experience, SEO visibility, performance, conversion readiness, content quality, and how discoverable you are to AI assistants like ChatGPT.

Every finding below is grounded in what was actually found on your live page — not generic advice. Where a claim is a measured fact, we say so; where it's a reasoned estimate, we say that too, so you always know how much to trust it.

Report structure

This report moves from your overall score, to a prioritized action plan, to a full category-by-category breakdown, closing with a practical handoff checklist.

How to use this report

Start with the Overall Health Score and Priority Actions to see what matters most right now. Use the detailed sections that follow when you're ready to dig into a specific area.

Questions, or need a hand implementing any of this? Reach out — we're happy to help.

Cheers,
cpms

Methodology & Limitations

This report changes its presentation so that automated findings are not presented as facts when the underlying data cannot prove them. Revenue figures are models, not measured revenue. AI-search scores are heuristic readiness indicators unless the report contains actual live query/citation evidence. Platform-specific data (for example Google Business Profile) requires direct platform access to verify. See the evidence legend above for how each finding is classified.

Agency Handoff Checklist

- ☐ Confirm every critical finding against the live URL
- ☐ Record before/after values in Search Console / Analytics where available
- ☐ Implement fixes only after client/developer approval
- ☐ Re-run the relevant audit after implementation
- ☐ Track the agreed KPI for 30–90 days

audit — Find the issue → show the evidence → generate the fix → verify the result → monitor the change.
